From home kitchen to store shelf

Tech4Bharat, GAVS 2026
Agentic AI track · Problem 6.3

Team Clo · Founder: Adarsh Kumar

Meet the maker

ILLUSTRATIVE STORY

A home pickle maker in Ghaziabad. Her neighbours love her aam ka achaar.

A local store and an online marketplace both say:

“Bring a proper label, a batch number and your FSSAI registration.”

TODAY

- Labels are handwritten
- Batches live in memory
- Prices are guesswork
- Registered once, or never

Result: she stays local, and often sells below her true cost without knowing it.

The scale of it

~25 lakh

unregistered, informal food processing enterprises in India

About 98% of the sector

~66%

are in rural areas

~80%

are family-based

~1.96 lakh

micro food enterprises already supported by the PMFME scheme

The demand to formalise is real

Sources: Cabinet approval of the PMFME scheme, pmindia.gov.in (May 2020; estimates from NSSO 73rd round and ASI 2015-16). PMFME progress: MoFPI media briefing, May 2026, as reported by KNN India.

Why it's still unsolved

Each step alone is easy. Together, in English forms and regulation PDFs, they lock her out.

Registration

Which one? What documents?

Label

Weight order, allergens, nutrition, batch, dates

Costing

Does her price even cover cost?

Records

Which batch went to whom?

What exists today: consultants charge per registration, then stop. Canva doesn't know the rules. Billing apps skip compliance.

Nobody joins it up, in Hindi, by voice.

GharSe: a Hindi-first AI agent on WhatsApp

She sends one voice note. GharSe makes her product shelf-ready.

Voice note or recipe photo → **GharSe agent** → **6 outputs**

- True cost + minimum price
- Draft label (PDF), FSSAI format
- Batch records by voice
- Registration checklist
- Listing pack, Hindi + English
- Proactive nudges

How it works: the agent loop

READINESS TRACKER, FOR EACH PRODUCT

Recipe	Costing	Label	Registration	Listing
done	done	**next step**	missing	missing

The agent finds the next missing step and asks for it.

One short question at a time, in simple spoken Hindi.

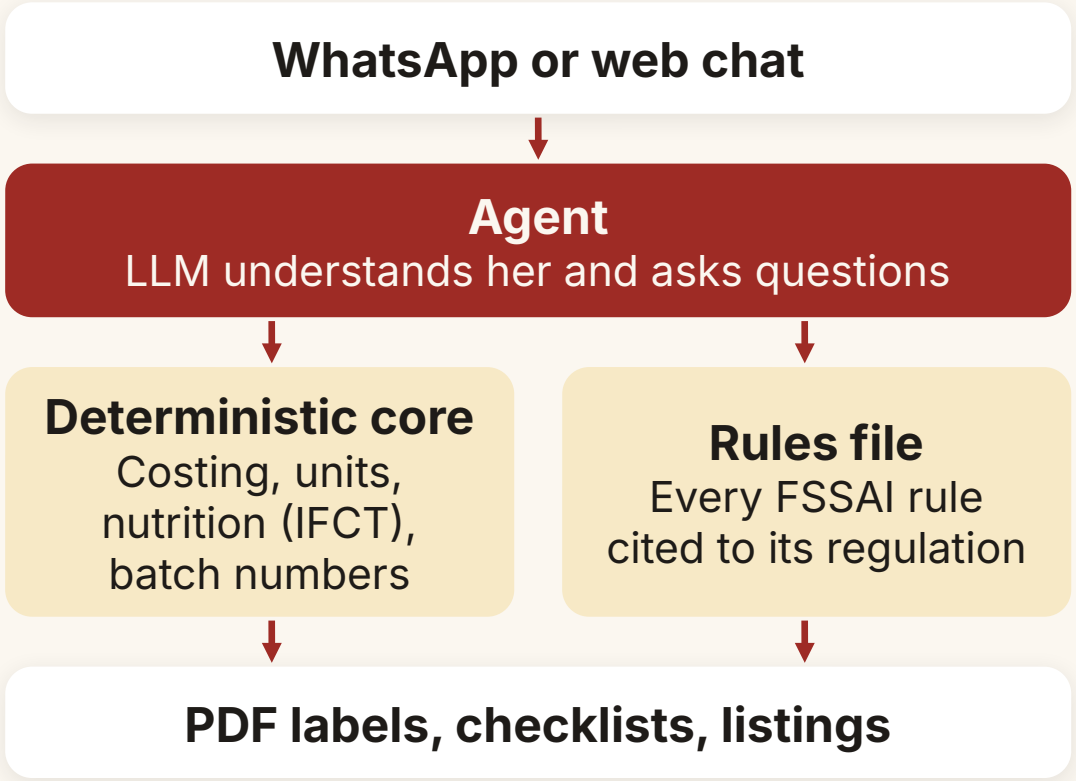

Chat numbers are illustrative.

“5 kilo aam, 1 kilo namak, 2 katori mirchi”

2 katori mirchi lagbhag 200 gram hai. Sahi hai?

Aapka daam ₹120 hai, lekin ek jar ki lagat ₹134 aa rahi hai. Kam se kam ₹149 rakhein?

Built to be trusted

The AI never does the maths.
Every number comes from tested code.

The AI never invents a rule.
Rules are data with citations, so a rule change is a data update.

A person signs off on every label and every cost.
Safety certification stays with authorities and accredited labs.

Low literacy
Voice in, voice out

Low connectivity
Small images, light pages

Cheap Android phones
Big buttons, small app

Follow the money

Sellers

Free for one product. ₹99/month adds unlimited products and print-ready label packs: less than one jar of achaar.

Buyers

THE BIG ONE

Retailers, ONDC seller apps and marketplaces spend effort finding small suppliers whose paperwork is in order. GharSe brings them compliance-ready producers. Paid per lead or by subscription.

Partners

Referral fees from packaging and label printers, and from food testing labs for shelf-life tests.

Go-to-market

Wedge

Home food sellers in Delhi NCR, reached through Instagram and WhatsApp seller communities.

Scale

Self-help group federations and state rural livelihood missions, which already run formalisation programmes, plus food processing training institutes.

Why now

FSSAI simplified registration for small businesses in 2026, and ONDC is opening e-commerce to small sellers. The door is open; sellers just need help walking through it.

Status and roadmap

Now

Prototype in build
Chat simulator, tested maths core, 2 demo products: aam ka achaar, besan ladoo

Nov 2026

Field interviews with 20 home food sellers in NCR, to test the flow and the ₹99 price

Dec 2026

End-to-end demo
Voice note to label PDF, costing, batch, checklist and listing in under 3 minutes

Next 6 months

Pilot
with 50 sellers, WhatsApp live, first buyer-side partnership

Pilot success metric: 25 of the 50 pilot sellers with a compliant label and at least one sale beyond their town.

Every home kitchen in India can be a brand. The paperwork shouldn't be the reason it isn't.

WHAT WE'RE LOOKING FOR

- Pilot partners: SHG federations, retail buyers, ONDC seller apps
- Mentorship on food regulation
